

N2N Contracting Group

A Wholly Owned Subsidiary of “N2N of Farming Group”

Overview

N2N Contracting Group (NCG), provides all site services for each different N2N project along with undertaking civil engineering, contracting services for third-party clients. These services includes the supply of land clearing, excavation, grinding, mulching, preparation for cropping and harvesting, earth-moving excavation, transportation and all establishment and on-site services such as water, drainage, power etc.

N2N Contracting Group owns / operates a wide variety of equipment / machinery including dozers, loaders, excavators, grinders, flat-bed / tip-trucks and trailers, tractors, spray-units, baggers, cultivation and harvesting equipment etc.

N2N controls all aspects of the projects it undertakes as a fully vertically integrated business thereby reducing the overall risk of any project and eliminating any potential third-party issues.

History.

A founding partner, (and CEO of NCG), in the N2N Group of Companies , (of which NCG is a member, www.n2ngroup.global), has over thirty-five plus years of contracting experience including projects in different countries and personal ownership of an existing US based pipeline and civil contracting business.

As the N2N farming operations involve substantial capital commitments in plant and equipment, much of which is utilized on a seasonal basis only, the decision was made to form NCG as a vehicle for the expansion of the existing contracting business and amalgamate the additional N2N plant and equipment into the new and expanded operation.

Services provided by NGC.

NGC continues to invest in systems and technology that optimize the operational parameters of our Plant and Equipment. This includes laser guided / control systems to auto-measuring / recording, (weight & cubic), systems, to GPS and reporting / tracking systems.

The main areas of expertise that NCG specialize in are as follows:

Civil works: Land clearing, earthworks, drainage, infrastructure development

Services installation: Power, water, drainage and gas reticulation

Biomass process: land clearing, mulching / grinding / processing

Transport: Bulk product / Tip trucks, machinery moves and over dimensional loads

Demolition: Teardowns, Strip-outs, waste material processing

Agricultural services: A wide variety of farm /land related services

Specialized services: Retaining Walls, (structural & decorative), Underground Tanks, (petrochemical, drainage, gas), Pump Stations, Septic systems

Off-Site Capabilities.

NGC has the management and infrastructure capabilities to operate as the General Contractor on mid-sized products or as sub-contractor for select portions of larger contracts.

Being a vertically integrated operator with the ability to provide both Bonding and Insurance, make NCG your one-stop-shop for all civil, services and land related projects
